Gaps in Infrastructure

Proposed Solutions

Outcomes

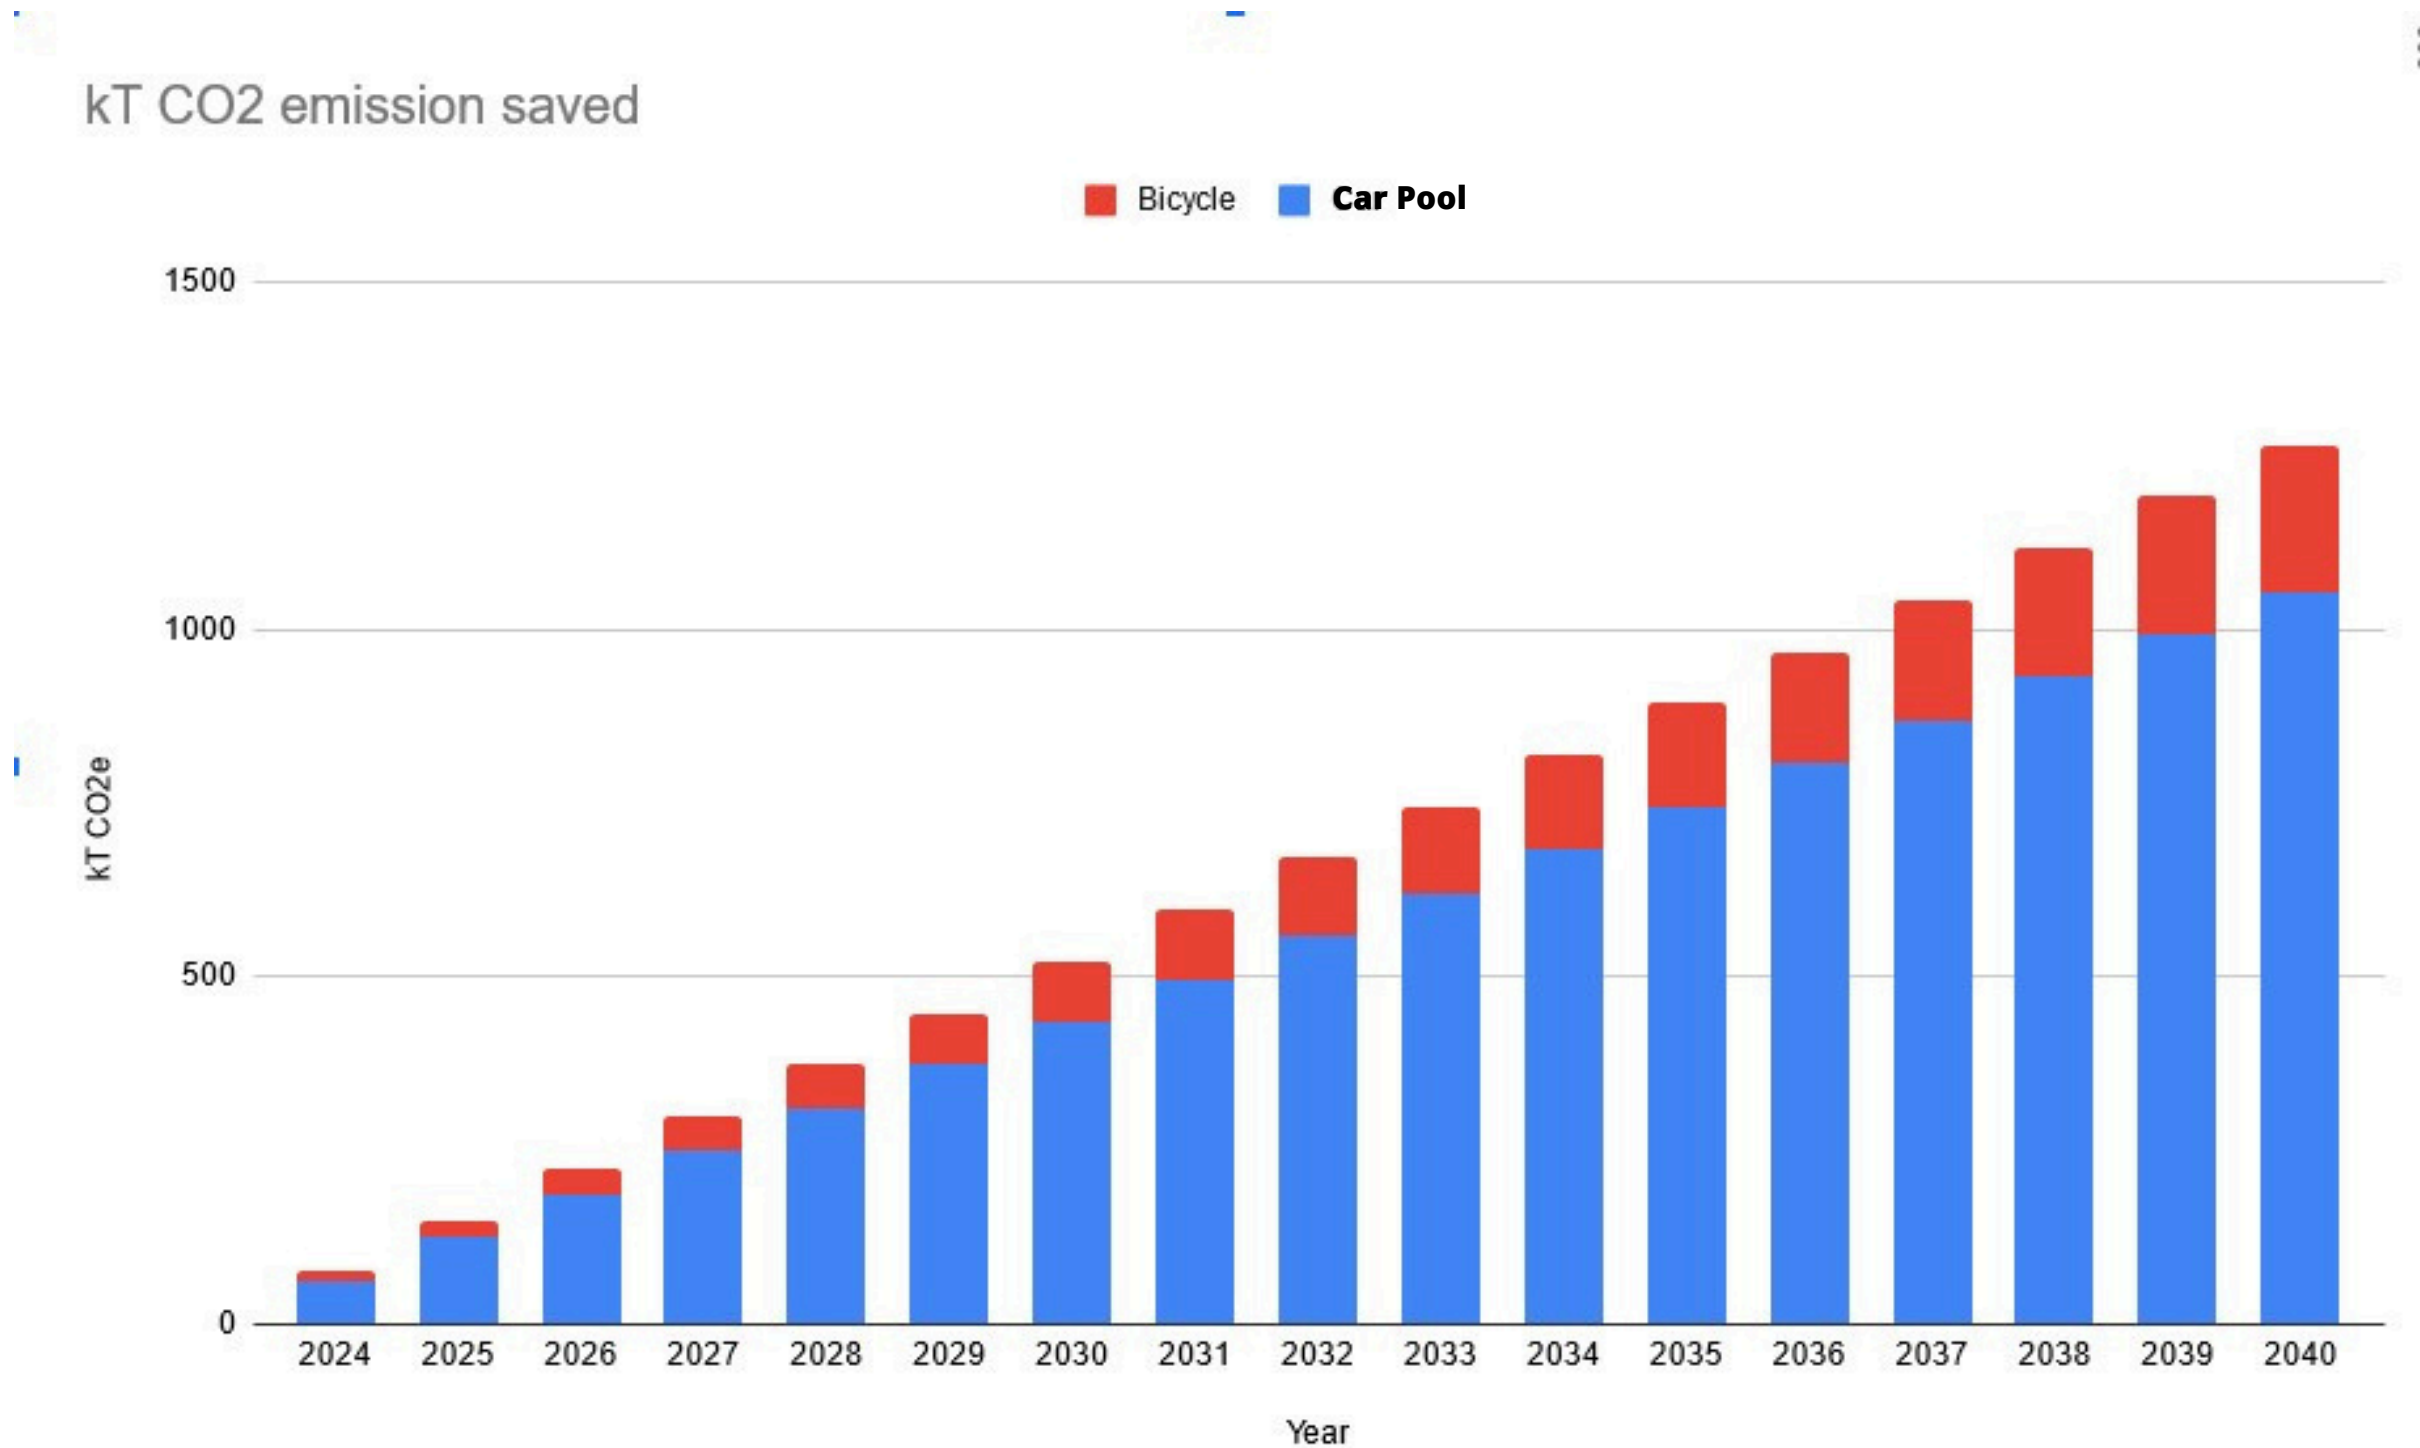

**1 car generates 17kg CO₂ per
100km**

**1 Car Pool ride save 8.5kg CO₂
emissions**

**10,000 rides could save 85 tonnes
of CO₂ emissions**

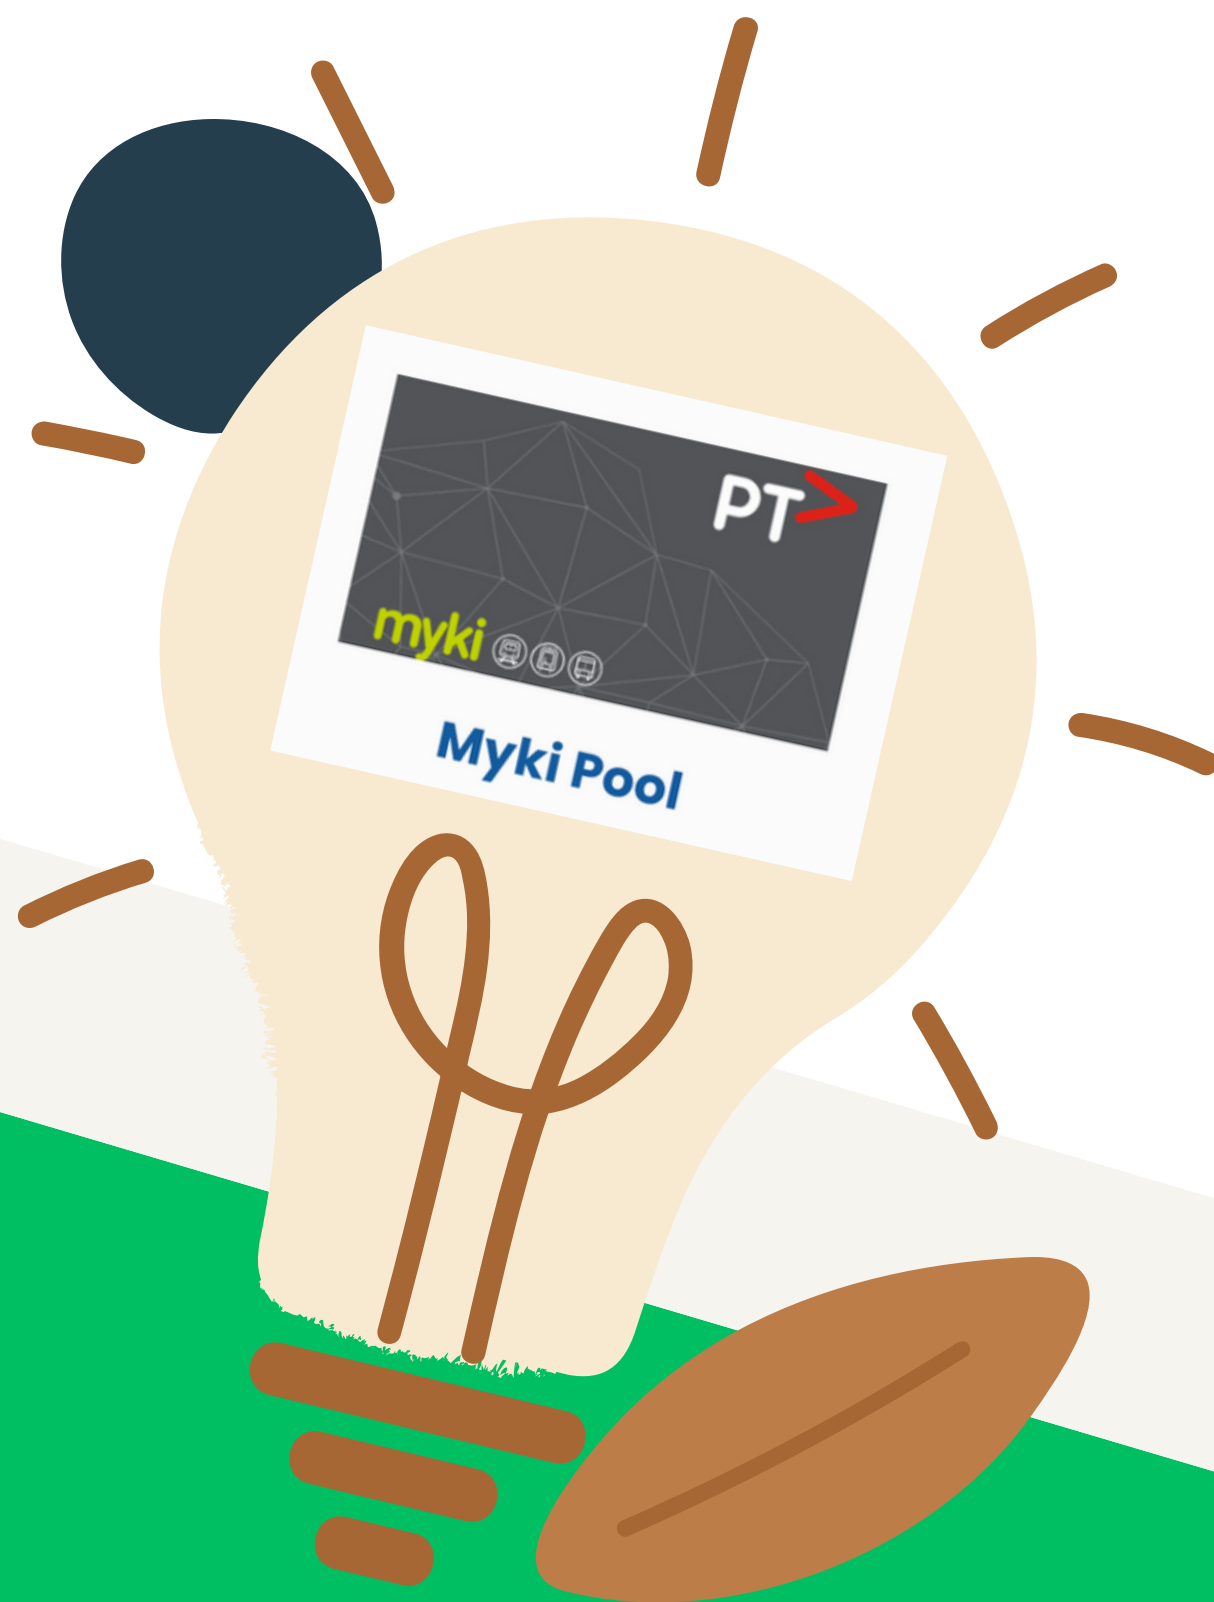

Based on 15 year projection

**Over 1.8mT CO2 emissions
can be saved**

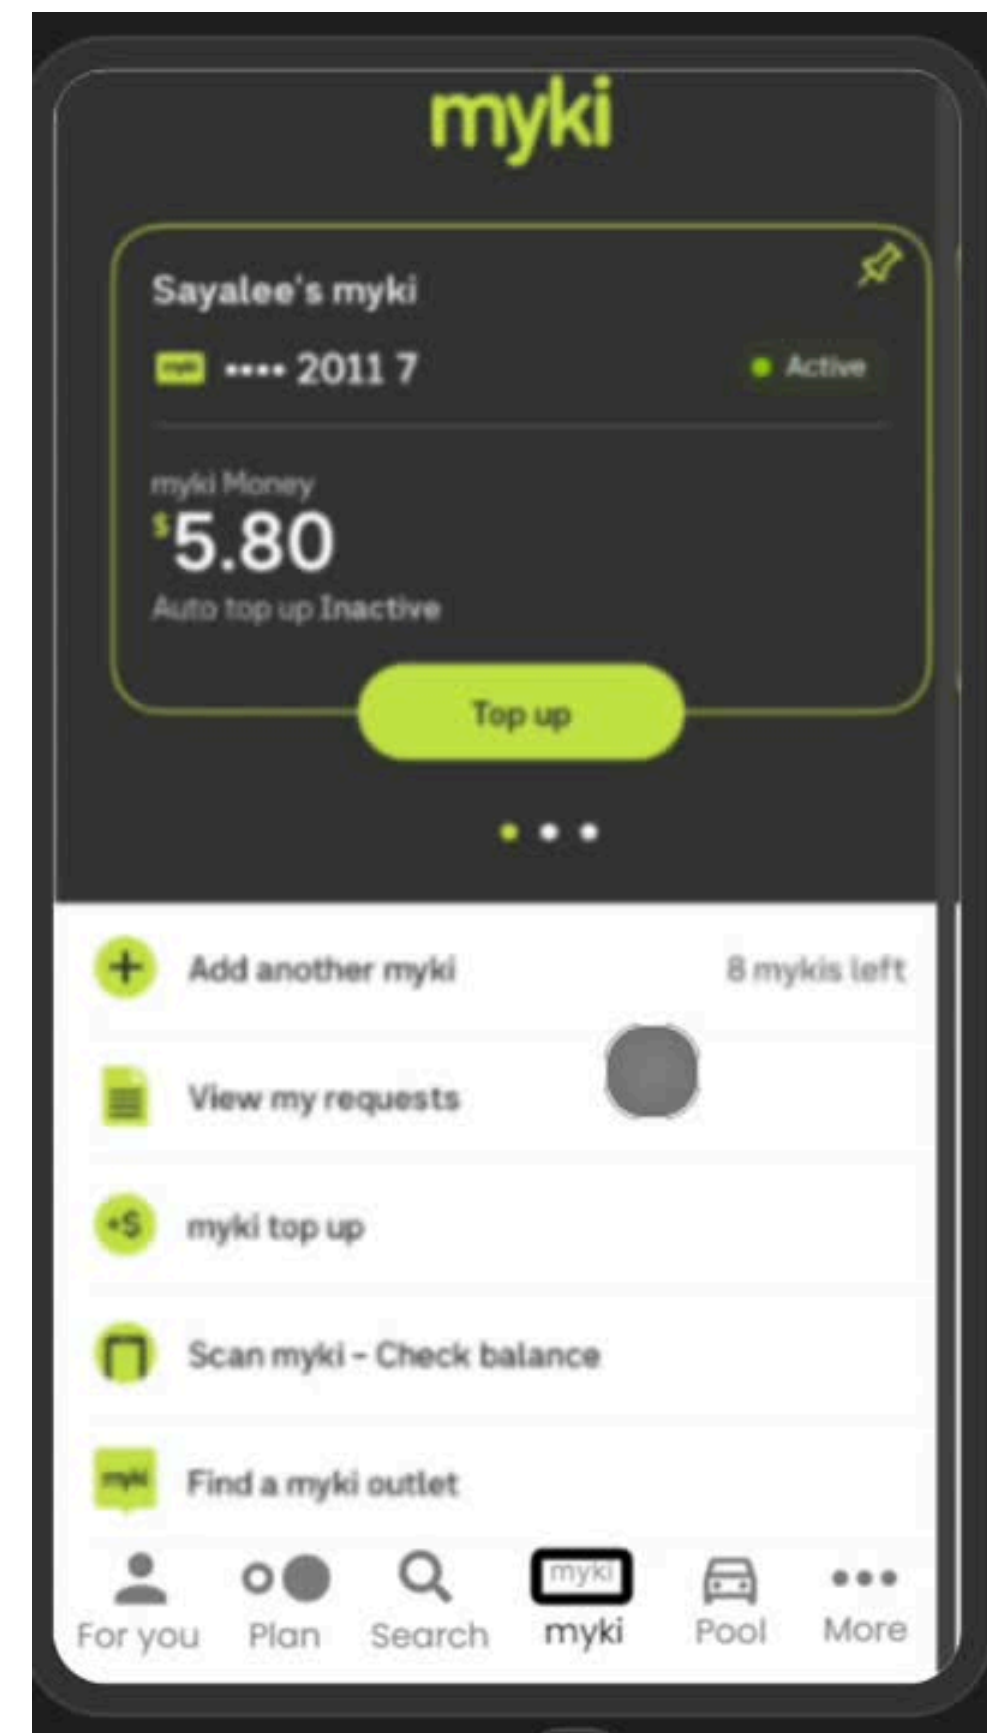

**On converting reduced CO2 emissions to VEEC STCs,
every year **135,000** certificates can be traded**

**With current trade price of \$108/certificate,
over **\$15 million revenue** can be generated**

This is a a proposal that integrates with the current myki infrastructure to provide car pool services.

The Charge Spot

- The EV Charge Spot app is designed to simplify the search for electric vehicle (EV) charging stations and promote sustainability. It offers two key features:
- Search Chargers: Easily find nearby EV charging stations based on your location.
- List Chargers: View a comprehensive list of available chargers in your area for convenient access.

Charge Spot

Find Chargers

Discover available chargers in public garages and list your own for others to use. Convenient and easy to use.

Search

List Charger

- **Discounted or Free Rides:** Offer lower fares or free public transport to high-emission zones during peak hours.
- **Congestion Pricing:** Charge drivers entering high-emission areas and use the funds to subsidize public transport.
- **Green Rewards:** Reward commuters using public transport with loyalty points or carbon credits.
